INSTALLATION

Before starting to use your refrigerator, you should pay attention to the following points:

- The operating voltage of your refrigerator - freezer is 220 V.
- The plug must be accessible after installation.
- Your refrigerator may smell when it is operated for the first time. This is normal and the odor will fade when the freezer of your refrigerator starts to cool down.
- Before connecting your refrigerator, make sure that the information on the data plate (voltage and connected load) matches that of the mains supply. If in doubt, consult a qualified electrician.
- Insert the plug into an efficiently grounded socket. If the plug is not grounded or the plug does not match, we recommend that you consult an electrician for assistance.
- The appliance must be connected to a properly installed fused outlet. Power supply (AC) and voltage at the point of operation must match the details on the nameplate of the appliance (the nameplate is located on the inside left of the appliance).
- We do not accept liability for any damage that occurs due to ungrounded use.
- Place your fridge freezer where it will not be exposed to direct sunlight.
- Your refrigerator should never be used outdoors or exposed to rain.
- Your appliance should be at least 50 cm away from stoves, gas ovens and heater cores and at least 5 cm away from electric ovens.
- When your refrigerator is placed next to a freezer, there should be at least 2 cm between them to prevent the formation of moisture on the outside surface.
- Do not place heavy objects on top of the appliance.
- Thoroughly clean the appliance, especially the interior, before use (see Cleaning and Maintenance).
- The installation procedure on the cooking unit is provided in the installation manual. The product is designed for use in suitable kitchen units only.
- Before using your refrigerator, clean all parts with a solution of warm water and a teaspoon of baking soda, then rinse with clean water and dry.
- Place all parts in the refrigerator freezer after cleaning.

TECHNICAL SPECIFICATIONS

Product Dimensions	540x545x1770mm
Total Volume (net)	243
Refrigerator Volume (net)	180
Freezer Volume (net)	63
Number of Compressors	1pc
Freezer Capacity	3 kg/24h
Performance Star Rating	4
